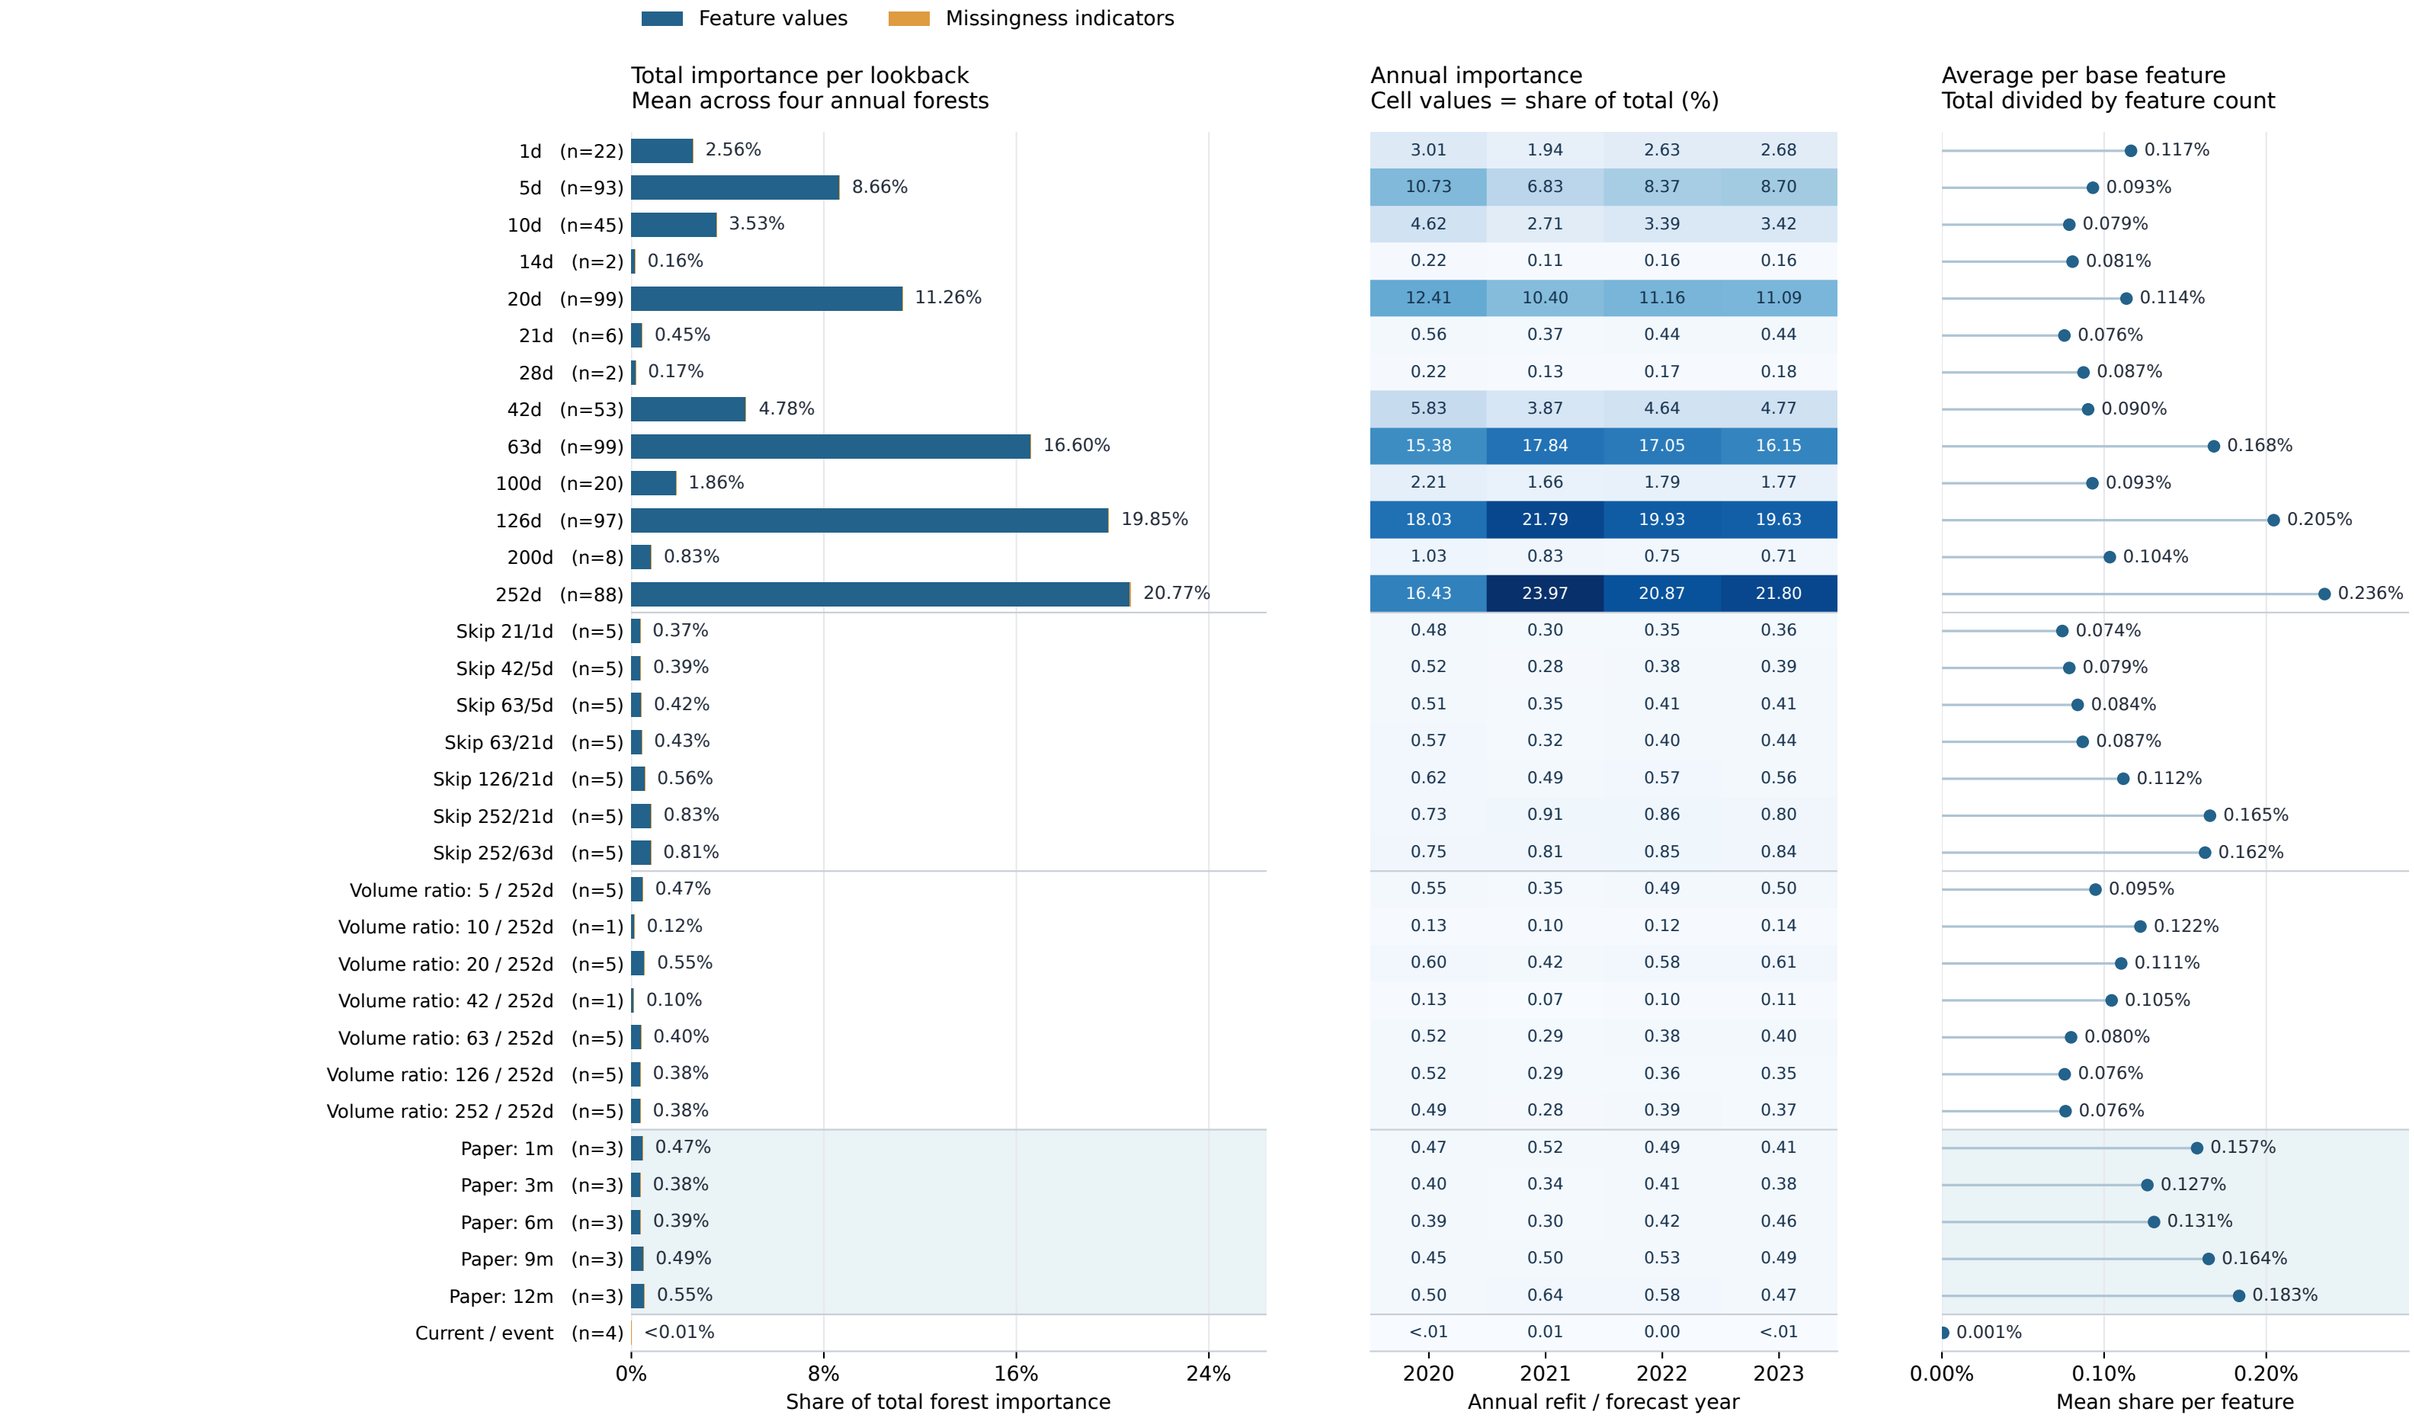
Expanded RF: importance by feature lookback

Endpoint-return classifier • 2020–2023 annual refits • 715 base features + 715 missingness indicators



Training split importance (MDI), not out-of-sample return contribution. All groups together sum to 100%; n = base feature count.

Daily windows, skip windows, 252-session volume baselines and the paper’s nominal monthly horizons are kept distinct. Paper rows are shaded.
